mesotherapy treatments.

DESCRIPTION

'Mesotherapy is an effective process that enzymatically shrinks fat and cellulite through a series of injections.

The procedure involves tiny injections into the mesoderm (fat layer under the skin) layer where excess fat, dimpling or cellulite troubles the patient.

silhouette⁰² is a concentrated lipolytic solution designed to treat local fat excess. It actively remodelates and defines body shape. Our formula allows while activating lipolysis at the same time stimulates microcirculation and anti-oxidant activity.

ACTIVE INGREDIENTS

Sodium deoxycholate, L-Carnitine, Vitamin E.

BENEFITS

Activates lipolysis
Decreases fat cell thickness
Prevents adipocytes growth
Reshapes silhouette
Reduces double chin
Reshapes silhouette

POSSIBLE MIXTURES

Non

MESO PROTOCOL

Recommended time between sessions

Traditional 15 days interval

Number of sessions

Starting treatment..... 6
Maintenance every 6 - 8 months

MESO PROTOCOL

Recommended depth per area

The technique of application is subcutaneous infiltration and not intradermal infiltration (mesotherapy), with a 30 G or 30 1/2 G hypodermic needle 13 x 0.3 mm. The injection should be performed with the needle perpendicular to the skin, at a depth of 12 or 13 mm, injecting 0.1 to 0.2 ml per point, at a distance of 2 to 3 cm between each point.

'Point-by-point' technique may be an alternative, with this technique inject 0.05 to 0.1mL per point of injection between 4-6mm deep.

Special care should be taken not to surface the needle to a depth of less than 4 mm (intradermal application), as there is a risk of skin necrosis.

'Point-by-point' technique may be an alternative, with this technique inject 0.05 to 0.1mL per point of injection between 3-6mm deep.

PERESENTATION & REFERENCE

Vial.....10 mL (0.176 fl. oz)
Box.....10 x 10mL vials
Reference.....102827

Biological product sterilized by filtration
No paraben, alcohol, ingredients of
animals origin or colouring.
Microbiologically tested.
